ABOUT ME

After being raised in the municipality of Ecatepec, Estado de México and experiences the process of urban micromigration that happens in the metropolitan area of the “Valley of Mexico”, I do have very clear the challenges that mobility, inclusion, and equity represent inside a city. That is the main reason why I first got interested in architecture, since it is a discipline capable of transcending and transforming social, urban and individual dynamics through the design of infrastructure in public and private spaces.

I graduated from Monterrey Tech (ITESM-MTY) in 2020 and shortly after, I had the opportunity to start my career in Chicago, Illinois. Under the guidance of Francisco González Pulido, I learnt the challenges and impact that architectural projects represent on different scales. In spring 2023 I was admitted to the MS.AAD (Master in Science in Advanced Architectural Design) program at Cornell University.

INTERESTS

I am a person whose interests go beyond architecture and design. I consider that my ideas are fed by diverse areas of knowledge and science. I always look forward to the new technologies and possibilities that can be implemented in architecture. I find very interesting the relationships that can be done between architecture and other disciplines such as computation, programming, psychology, agriculture, biology, etc.

Inside architecture, I am particularly interested in sustainable and biophilic design, as well as in automatization and parametrization of algorithmic design. I am convinced that nowadays technology allows us to iterate in a more efficient way. Finally, I strongly believe that sustainability should not be an interest, but rather a duty of all architects.

STUDIES / PROFESSIONAL EXPERIENCE

2015 Tecnológico de Monterrey - B. Arch

(August 2015 - June 2020)

Honorable mention of academic excellence (95.1/100). Former member of the track and field team. Distinction in the exam “CENEVAL EGEL ARQUITECTURA” with “Outstanding” result.

2018 MEspinosa - Arquitectura Urbanismo

(January 2018 - June 2019) Part time intern

Full participation in the process of design for the project “Casa Parras”. Furthermore, miscellaneous work for the residential towers “Murania”.

Semestre I - BIM Edificación

(August 2018 - December 2018)

Intensive program related to the BIM methodology implementation, it included structural analysis, MEP engineering, costs and management of the same project, a proposal for the new university design center.

2019 C. Lab Norte - Tecnológico de Monterrey

(July 2019 - December 2019)

Research Assistant

Research work for urban projects, in Nuevo León, México. Usage of mapping tools such as Qgis. Development of urban design strategies as well as maps and graphics. Gathering of resources and data interpretation for the project “Cerro de la Campana”.

2020 FGP - Atelier

(January 2020 - January 2021) Full time intern

(January 2021 - May 2023) Design Architect

Participation in diverse projects along different phases, located in several international locations. Experience in China, Saudi Arabia, Mexico and U.S.A.

- AIFA - Design Development

- GICC Tower - Lobby Redesign

- PODER - Concept Design + Landscape

- 1KT - Concept Design

- MAZ - Concept Design + Design Development + Construction Documents

- REX2030 - Concept Design
